1. Introduction to Bankline export

1.1 What is Bankline BAIv2 export?

Bankline allows your business to manage everyday banking over the internet, including the ability to view account information, payment details and user profiles. Bankline export enables you to export much of that information in the BAIv2 format that can then be accessed outside of Bankline.

Bankline BAIv2 supports the export of:

- account information for account set

This user guide details how this export files is structured.

1.2 How are Bankline BAI v2 export files structured?

Each export file is structured in line with the rules specified by the Bank Administration Institute.

BAIv2 export files are in [.TXT] text file format.

2. Export files

2.1 Statement for account set – BAIv2 format

The default file name is **Acc set name_dd-mm-yy_HH-MM-SS BAIv2_file id.txt** and the export file, which can contain multiple transactions, is structured like this.

Note 1: Continuation record - The “Record Code” field is followed by a continuation of the preceding record. The format is exactly the same as in the preceding record. If the preceding record ended within a text field, the text continues in the 88 record. If the preceding record did not end within the text field, the 88 record continues with whatever field follows the final field in the preceding physical record. Do not split nontext fields between records. If a nontext field is begun in one record, it must be completed in that record. The following 88 record may continue with the next field.

Note 2: Date fields are held in the format yymmdd.

Note 3: Conforms to BAIv2 standard whereby “/” delimiter only present when Continuation Record (88) required.

Note 4: Combinations of balances and floats items are described in the following table:

Account Type	RBS Domestic		RBS International		External
